SECTION A

INDEX TO VOLUME 26

Subjects

Absorption measurements of sound in sea water, 306.

Acetylene, Vibrational constants of, 279.

Adsorption surface areas
A comparison of X-ray and nitrogen adsorption surface areas of carbon blacks and charcoals, 236.

Aerial photography, Daylight, Choosing an emulsion and processing technique for, 60.

Alpha-particles, Measurement of the energies of, 243.

Angular distribution of neutrons inside a scattering and absorbing medium, 99.

Antennas
A simplified broadside dipole array, 65.
V-, Stacked, An omni-directional array of, 22.

Area, See Surface area.

Array
Broadside dipole, A simplified, 65.
Omni-directional, of stacked V-antennas, 22.

Atmosphere, Upper, Excitation of hydrogen and helium in, Remarks on the, 359.

Barrier-layer photocell, Approximate measurement of color temperature with a, 23.

Blacks, Carbon, See Carbon blacks.

Boiling, Surface, Heat transfer with, 268.

Boron, γ-Rays from disintegration of, by slow neutrons, 366.

Broadside dipole array, A simplified, 65.

Canada, Northwestern, Gravity anomalies in, 199.

Carbon blacks
and charcoals, A comparison of X-ray diffraction and nitrogen adsorption surface areas of, 236.
Surface area measurements of, 29.

Charcoals, See under Carbon blacks.

Circuit, A high temperature control, 145.

Color temperature, Approximate measurement of, with a barrier-layer photocell, 23.

Combustion process in gas streams, See Gas dynamic treatment of exothermic and endothermic discontinuities.

Conductivity, Thermal, of Napalm–gasoline gels, 50.

Constants, Vibrational, of acetylene, 279.

Control circuit, A high temperature, 145.

Conversion, Internal, of γ-radiation in heavy elements, Emission of L radiation following, 404.

Cygni stars, P, Photoelectric temperatures of, 149.

Daylight aerial photography, Choosing an emulsion and processing technique for, 60.

Deuterium, Attempt to detect an $(n, 2n)$ reaction in, 386.

Diffraction
A comparison of X-ray diffraction and nitrogen adsorption surface areas of carbon blacks and charcoals, 236.

Dipole array, Broadside, A simplified, 65.

Discharges, High frequency, Studies in, 205.

Discontinuities, Exothermic and endothermic, Gas dynamic treatment of, 1.

Disintegration
of boron by slow neutrons, Gamma rays from the, 366.
of ThC and RaD, The emission of L radiation in the, 421.
of thorium C″, Search for a 3.20 Mev. γ-ray in the, 379.

Distribution of neutrons, Angular, inside a scattering and absorbing medium, 99.

Eclipse, Solar, observations, of the ionosphere, 137.

Elements, Heavy, Emission of *L* radiation following internal conversion of γ-radiation in, 404.

Emission of *L* radiation
following internal conversion of γ-radiation in heavy elements, 404.
in the disintegration of ThC and RaD, 421.

Emulsion
Choosing an emulsion and processing technique for daylight aerial photography, 60.

Endothermic and exothermic discontinuities, Gas dynamic treatment of, 1.

Energies of α-particles, Measurement of the, 243.

Excitation of hydrogen and helium in the upper atmosphere, Remarks on the, 359.

Exothermic and endothermic discontinuities, Gas dynamic treatment of, 1.

Exposure graphs for radium radiography of steel, Sensitivity and, 292.

Films, Thin transparent, Index of refraction of, A method for the determination of, 230.

Fission
of U^{235}, Gamma rays produced in the, 79.
fragments, Initial ionization produced by, 115.

Gamma radiation in heavy elements, Emission of *L* radiation following internal conversion of, 404.

Gamma radiography of steel, 292.

Gamma ray(s)
from the disintegration of boron by slow neutrons, 366.
of thorium CC′, 313.
3.20 Mev., Search for a, in the disintegration of thorium C″, 379.
produced in the fission of U^{235}, 79.

Gas dynamic treatment of exothermic and endothermic discontinuities, 1.

Gasoline–Napalm gels, Thermal conductivity of, 50.

Gas streams, Combustion process in, See Gas dynamic treatment of exothermic and endothermic discontinuities.

Gels, Napalm–gasoline, Thermal conductivity of, 50.

Graphs, Sensitivity and exposure, for radium radiography, 292.

Gravity anomalies in northwestern Canada, 199.

Half-period of polonium 213, Measurement of, 255.

Heat transfer with surface boiling, 268.

Heavy elements, Emission of *L* radiation following internal conversion of γ-radiation in, 404.

Helium and hydrogen in the upper atmosphere, Remarks on the excitation of, 359.

High frequency discharges, Studies in, 205.

High temperature control circuit, A, 145.

Hydrogen and helium in the upper atmosphere, Remarks on the excitation of, 359.

Index of refraction of thin transparent films, A method for the determination of, 230.

Internal conversion of γ-radiation in heavy elements, Emission of *L* radiation following, 404.

Ion source, A positive, 69.

Ionization, Initial, produced by fission fragments, 115.

Ionosphere, Solar eclipse observations of the, 137.

Jet propulsion, Ram-, Theoretical study of, 327.

***L* radiation, Emission of,**
following internal conversion of γ-radiation in heavy elements, 404.
in the disintegration of ThC and RaD, 421.

3.20 Mev. γ-ray, Search for, in the disintegration of thorium C″, 379.

Napalm–gasoline gels, Thermal conductivity of, 50.

Neutrons
Angular distribution of, inside a scattering and absorbing medium, 99.
Slow, γ-Rays from the disintegration of boron by, 366.

Nitrogen adsorption surface areas of carbon blacks and charcoals, A comparison of X-ray diffraction and, 236.

(*n*, 2*n*) reaction in deuterium, Attempt to detect an, 386.

Northwestern Canada, Gravity anomalies in, 199.

Omni-directional array of stacked V-antennas, An, 22.

α-Particles, Measurement of the energies of, 243.

P Cygni stars, Photoelectric temperatures of, 149.

Permeability
equations, Modified, Surface area measurements of fine powders using, 128.
studies. III. Surface area measurements of carbon blacks, 29.

Photocell, Barrier-layer, Approximate measurement of color temperature with a, 23.

Photoelectric temperatures of the P Cygni stars, 149.

Photography, See Daylight aerial photography.

Polonium 213, Measurement of the half-period of, 255.

Positive ion source, A, 69.

Powders,
Fine, Surface area measurements of, using modified permeability equations, 128.
See also Carbon blacks.

Propulsion, Ram-jet, Theoretical study of, 327.

Radiation, See Gamma radiation and *L* radiation.

Radio
A note on an omni-directional array of stacked V-antennas, 22.
A simplified broadside dipole array, 65.
method of studying the yaw of shells, 167.

Radiography, Radium, of steel, Sensitivity and exposure graphs for, 292.

Radium D and Thorium C, Emission of *L* radiation in the disintegration of, 421.

Radium radiography of steel, Sensitivity and exposure graphs for, 292.

Ram-jet propulsion, Theoretical study of, 327.

(*n*, 2*n*) Reaction in deuterium, Attempt to detect an, 386.

Refractive index, See Index of refraction.

Sea water, Absorption measurements of sound in, 306.

Sensitivity graphs for radium radiography of steel, Exposure and, 292.

Shells, Yaw of, A radio method of studying, 167.

Slow neutrons, γ-Rays from the disintegration of boron by, 366.

Solar eclipse observations of the ionosphere, 137.

Sound, Absorption measurements of, in sea water, 306.

Source, A positive ion, 69.

Spectrography, Effect of variations in the general composition of samples in spectrographic analysis, 39.

Stacked V-antennas, An omni-directional array of, 22.

Stars, P Cygni, Photoelectric temperatures of, 149.

Steel, Radiography of, by use of gamma rays from radium, 292.

Surface area
A comparison of X-ray diffraction and nitrogen adsorption surface areas of carbon blacks and charcoals, 236.
measurements
of carbon blacks, 29.
of fine powders using modified permeability equations, 128.

Surface boiling, Heat transfer with, 268.

Temperature(s)
Color, Approximate measurement of, with a barrier-layer photocell, 23.
High, control circuit, 145.
Photoelectric, of the P Cygni stars, 149.

Thermal conductivity of Napalm–gasoline gels, 50.

Thin transparent films, See Films.

Thorium C and radium D, The emission of *L* radiation in the disintegration of, 421.

Thorium CC′, γ-Rays of, 313.

Thorium C″, Search for a 3.20 Mev. γ-ray in the disintegration of, 379.

Transparent films, See Films.

U^{235}, Gamma rays produced in the fission of, 79.

Upper atmosphere, Excitation of hydrogen and helium in, Remarks on the, 359.

Uranium 235, Gamma rays produced in the fission of, 79.

V-antennas, Stacked, An omni-directional array of, 22.

Vibrational constants of acetylene, 279.

Water, Sea, Absorption measurements of sound in, 306.

X-ray diffraction and nitrogen adsorption surface areas of carbon blacks and charcoals, A comparison of, 236.

Yaw of shells, A radio method of studying, 167.
